

PROJECT	Kingston College
CLIENT	Lenmark Construction
PRODUCT	Invicta Block Paving
SIZE	300x200 design plan

Kingston College recently embarked on a £10 million refurbishment project, which included the remodelling of the main building's entrance and a new ground-floor student centre. The landscaping of the approach to the main building was a crucial part of the project.

Contractors Lenmark Construction were managing the refurb, however they encountered a major issue when the original supplier was only able to offer a 10-week lead time for the specified paving product.

The project required 900sqm of hard landscaping, and the original supplier was now unable to fulfil this order within the specifications.

This risked stalling the entire project, so Lenmark needed a reliable and immediate supply of high-quality paving products.

Lenmark contacted Brett for help.

As a leading independent manufacturer of concrete paving, Brett was able to offer Invicta pavers, featuring AggTech surface technology.

Our Invicta pavers were fully stocked and immediately available.

Our AggTech process uses unique natural aggregates on the surface of each paving block to create a stunning durable finish perfectly replicating natural stone. The paving was delivered in four complementary colours - Pearl, Moonstone, Onyx, and Citrine - in a 300x200 paving layout design plan.

Brett Landscaping's project designer worked closely with the architect to produce design take-offs, offering regular on-site visits to ensure that the installation was running smoothly, and that the Invicta product satisfied the brief.

Thanks to Brett's immediate supply the project was able to proceed without any delays.

The result was a successful refurbishment project that included a remodelled main entrance, a new ground-floor student centre, and a beautiful approach to the main building.
