GeoCeramica® Marmostone Black

What is porcelain – FAQs.

What is Brett Porcelain?

The Brett Porcelain range is manufactured in Europe using superior raw materials and manufacturing processes, creating a high end, premium product range.

Our product range is currently manufactured in Italy and Bulgaria, and fired at high temperatures, ensuring a high quality finish and reduced chance of breakage during the installation process.

Where can Brett Porcelain be installed?

Brett Porcelain is 20mm in thickness and can be used throughout the home and into the garden. We also offer 40mm and 60mm options in our GeoCeramica® range, with the former suitable for footpaths and patios and the latter suitable for driveways and vehicular trafficked areas, such as high-end retail, city centres and rooftop bars with support from our Brett Pedestals.

How expensive is Brett Porcelain?

As Porcelain paving continues to grow within the UK, there are several products available to purchase, with varying price tags. If the price looks too good to be true then it probably isn't porcelain OR it's a product with potential technical issues that may give a problem upon installation.

Did you know your product choice accounts for roughly 20% of your landscaping budget?

This means that you can feel confident in choosing any of our products without blowing your budget. The remaining 80% equates to the installation and sub-base materials.

Investing in this will ensure your paving stands the test of time.

Why choose Brett Porcelain?

Porcelain is easy to clean, scratch resistant, slip-resistant and available in a wide variety of styles and colours that won't fade. Manufactured to a premium quality, our porcelain paving can be used inside and out, creating a stylish outside space that's an extension of your home.

Our porcelain ranges combine subtle beauty, precision manufacturing, and everyday convenience to inspire even greater possibilities.

Here we talk you through the key areas you should consider when selecting your Porcelain Paving provider:

Strength and durability.

45N/mm²

The breaking strength of porcelain against other paving materials are very high and provides a key benefit for Brett's high-quality range.

'Chipping' of inferior products is often a concern (with this primarily happening during the installation process), so for a high-quality porcelain product, you want as high a figure as possible for Flexural Tensile Strength or Modulus of Rupture. The material average minimum required for porcelain is 35N/mm², while **Brett Porcelain's value is 45N/mm².**

Autumn Blend

Premium aesthetics.

Aesthetics account for a huge amount when making a Porcelain decision. At Brett, we can tell you exactly how many different surface aesthetics there are in our porcelain ranges. Depending on the style, the greater the number of variations the better the look. More variation in repeatable graphics ensures a more authentic replication of Natural Stones.

Frost resistance.

Our porcelain exhibits minimal thermal expansion, ensuring excellent dimensional stability. It possess remarkable frost resistance due to its low water absorption capabilities. Consequently, our paving is entirely impervious to frost damage.

Eden Slate Midnight Shadow & Clouded Sky

Not only will Brett's high quality Porcelain be more reliable to install, you can also rest assured that it can withstand the weight of hot tubs, garden structures and outdoor kitchens.

No need to worry about unavoidable spills from the BBQ, or scratches from your patio furniture. Maintained correctly, your Brett Porcelain patio will look great for years to come

Stain and scratch resistance.

CLASS 5

Stain resistance and cleanability are one of the major benefits of Porcelain paving, alongside water absorption.

Stain Resistance Classification is measured on a scale from Class 1 to Class 5, with Brett Porcelain achieving the highest **Class 5 rating**, meaning stains can be removed using hot water.

Slip resistance.

**> 36 SLIP
POTENTIAL
- LOW**

Porcelain is not slippery and to support this, most porcelain manufacturers will supply a Slip Resistance figure such as 'R11' (but this is a German measure of slip/skid and is not recognised in the UK).

At Brett, we also provide a 'UK Pendulum Test' to prove the suitability of the product in the market. Every product in the Brett range achieves a **> 36 Slip Potential-LOW rating** and an **R11 rating**.

Water resistance

0.5%

High quality Porcelain has a low water absorbency (**<0.5%**), meaning the water will sit on / run off the surface instead of soaking in.

This is why it is important to ensure porcelain paving is laid to the current falls (1 in 60) to ensure the water runs off and does not just sit on top of the paving.

Eden Limestone Cream

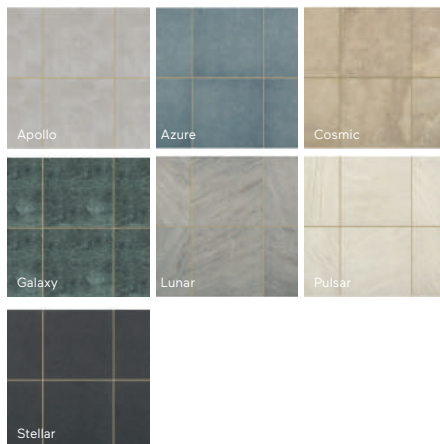

The Brett Porcelain Collection.

Eclipse.

A clean, refined range, Eclipse is a great value, stylish, high quality porcelain.

Create stunning, luxurious contemporary designs with our Eclipse paving, in seven distinct colour options and all the durability and attractive benefits of modern porcelain.

- 7 colour options
- Single size packs
- 600 x 600mm plan size
- 20mm thickness

Elegante.

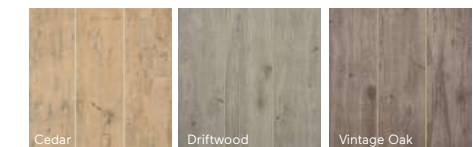

Premium quality porcelain paving. Offering the highest levels of elegance and sophistication, our Elegante collection speaks for itself.

- 2 colour options
- 20mm thickness

Considering porcelain? What you need to look out for.

If the price looks too good to be true, it probably isn't porcelain.

Ask for the country of origin - the risk is significantly reduced with Italian manufacturers.

All credible manufacturers will provide technical data sheets.

Do a simple 'water drip test'. If the product is high quality porcelain, the water will not soak in.

Testing for water absorbency needs to be across all production.

Choose a high classification for Stain resistance. Cleanability is a major benefits of Porcelain.

A high quality Porcelain manufacturer should have a 'UK Pendulum Test' to measure slip resistance.

Product below the permitted +/- 0.5mm breaking strength tolerance can have issues with breaking.

The greater the number of graphic variation the better the look.

Ask how the product will be packaged. Best practice is shrink with edge protection to prevent chipping.
